## Our Vision

Our vision is to contribute in the saving of water through our water-friendly products of modern technology so that more and more water could be saved for the people who face the problem of water-shortage in the world.

## Our Mission

Our mission is to enable people to have washing in minimum water consumption on affordable price without any headaches.

## Director Message

Washing laundry is a significant use of water in the average home, accounting for 15% to 40% of the overall water consumption inside the typical household of four persons. The average family washes almost 400 loads of laundry each year. In UAE the water is precious and costly more than anything. People cannot afford wasting of water. Through different researches regarding the usage of water, one point is very clear that we have to reduce the usage of water to curtail the bill of water and to save the water.

Water is an essential component of our daily life for cleaning and it has been observed that we waste lot of water in cleaning, the quantity of water used in cleaning can be reduced to affordable level through modern products which consume much less water in cleaning.

Labor camps are such places where use of water is very high and this huge use of water costs much to everyone living in labor camps. Smart wash offers a perfect solution to this problem. With smart wash washing machine, lot of water and the cost of water can be saved. Smart wash has been specially designed to provide best cleaning with minimum water consumption. It is a perfect product of modern big city life where every drop of water matters. It saves water, it saves money and it saves energy.
